

The Effect of Maintaining a Higher Hemoglobin Level on Neutropenia Duration after Bone Marrow Transplantation in Children: A Pan-Canadian Multicenter Randomized Controlled Clinical Trial

Funded in Partnership with the Childhood Cancer Canada Foundation

Abstract and Poster

1. Robitaille, N., LaCroix, J., Alexandrov, L., and Duval, M. Excess of veno-occlusive disease in the experimental arm of a clinical trial studying the effect of maintaining a higher haemoglobin level on neutropenia duration after bone marrow transplantation. *European Group for Blood and Marrow Transplantation (EBMT)*, April 2011.
2. Robitaille N, Lacroix J, Alexandrov L, Clayton L, Cortier M, Schultz KR, Bittencourt H, and Duval M. Excess of veno-occlusive disease in a randomized clinical trial on a higher trigger for red blood cell transfusion after bone marrow transplantation: a Canadian blood and marrow transplant group trial. *Biol Blood Marrow Transplant*, 2013 Mar;19 (3):468-73.
